

FHIR DRILL ACCELERATION PROGRAM

HEALTH
DATA
DECISIONS

FHIR adoption is picking up steam and many payors are funding pilot projects to retrieve valuable clinical data from key delivery systems and partners. Has your organization been able to successfully complete its first bulk data request? Not sure where to start?

HDD has launched an FHIR Drill Acceleration service that can help you navigate this technical labyrinth and demonstrate real ROI for quality improvement and risk adjustment use cases. Our approach can help your organization start small and leap ahead of big data aggregation vendors with a scalable process that you can maintain internally with minimal technical investment.

OUR APPROACH INCLUDES:

- Identification and prioritization of data opportunities
- Connection to FHIR data resources
- Configuration and authorization support
- Extraction and validation process design and testing
- Integration with existing data streams for risk adjustment and Stars support
- Evaluation of impact and ROI
- Roadmap to expand pilot for additional data elements and sources
- Assist in RFP requirements for a data aggregator and NCQA certified DAV

Digital Quality Measurement

Not sure where to start with CQL or mapping SNOMED codes for use in risk and quality? Comprehensive vendor solutions can be overwhelming and it can be a struggle to understand how EHR-based semantic representations link to claims for use in quality improvement, risk adjustment and social determinants of health.

Health Data Decisions empowers health plans and providers with data integration, sharing, and optimization expertise for Risk Adjustment, Star Ratings, HEDIS®, and Value-Based Care. Partner with us to unlock your organization's full potential in the competitive healthcare landscape.
